

# WOOD FOR ANCHORING APPLICATIONS

## Problem Description

- Wood is gaining more and more traction within the construction business.
- Hilti is developing a suite of structural connectors for wood applications.
- In order to support the development of such applications, the ability to simulate wood will become increasingly important.

## Objectives & Tasks

- Based on a relevant applications for the development, a use-case will be selected.
- Based on literature and previous experience, you will further develop our simulation capabilities for wood.
- You will have a deeper look into the capabilities of an existing, commercially available model for wood.
